FLOW OF RHYTHMICAL MOVEMENT

Kaoru Takizawa, Fuminori Matsuura, Nobuyuki Fujisawa, Fujie Kondo

Niigata University
8050 Ikarashi-2, Niigata, Japan, 950-2181

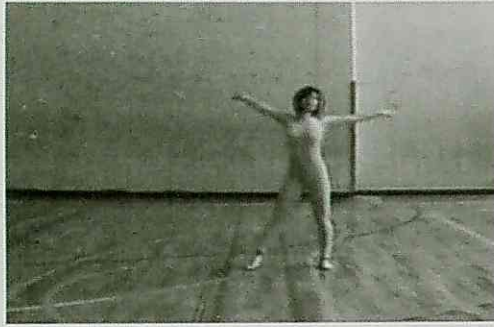

1. Artwork Description

The flow of rhythmical movement of a body was visualized to feel the liveliness of the body. The flow was displayed in an anaglyph stereo image taken by two color CCD cameras placed side by side. The stereo image of the flow can be seen using red-blue filtered spectacles.

2. Proposed Wall Text

The liveliness of rhythmical movement was conceived from the nature, such as the wave, the wind, the water and etc. Movement flows from the center of the body to peripheral parts of the body. We feel one sequence of motion from a snapshot of photo.

FLOW OF BREATH

The flow of breath is essential to the flow of movement. It is the breath that gives the body its life and the movement its meaning. The breath is the center of the body in movement and the center of the body in rest.
